

db WATCHDOG PROGRAM

Biometric Access Control on Colocation-Friendly Terms

The **db Watchdog** program delivers advanced biometric access control on terms consistent with the colocation business model. A low monthly fee, with no up-front payment, secures server cabinets to assure your customers their collocated assets are completely safe. Feature it across the board to differentiate your facility, or offer it on individual cabinets as an attractive upgrade. Added bonus for your customers: You have the option of letting them remotely manage, monitor, and produce reports on specific cabinets.

WHAT'S INCLUDED IN THE PROGRAM

The db Watchdog program's low monthly fee covers everything needed to physically secure colocation server racks for life. For each server cabinet you include in the program, Watchdog provides all necessary hardware, cabling, and software; lifetime hardware warranty and software/firmware upgrades; unlimited phone support; and 24-hour replacement of any non-functioning unit. Installation is available separately if desired.

HOW IT WORKS

Watchdog eliminates the normal db ServerRack up-front purchase cost, replacing it with a low monthly fee per cabinet, billed quarterly, that can flow through to your customers. Watchdog's lifetime warranty and upgrades to software and firmware protect your server cabinets with the latest biometric technology without your ever encountering additional cost.

The Watchdog program is extendible to as many server cabinets as you choose, and you can add cabinets at any time.

TERMS AND CONDITIONS

Program subject to credit approval. Minimum of 50 initial server cabinets required. Three-year contract required, with automatic renewal unless terminated by either party. Payment can be made monthly by ACH or quarterly by check. All associated software/hardware remain the property of Digitus Biometrics and must be uninstalled or returned in the event of cancellation

FOR MORE INFORMATION
